

System Components From Multiple Sources Can Be A Real Horror

Using products from different sources isn't just scary, its expensive, risky and time consuming. There's no guarantee that components from different vendors, especially the RF/microwave amplifiers and antennas, will work together and provide the performance or field level that you require.

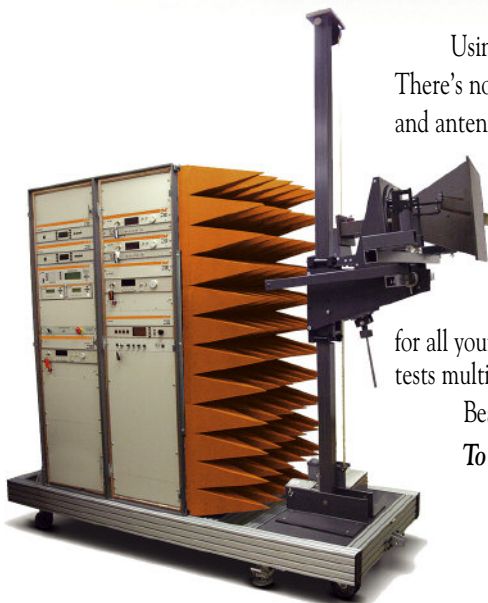

We have integrated solutions for all your EMC and RF testing needs: radiated and conducted immunity, radiated and conducted emissions and more. Your system is delivered as one complete unit, assembled and tested at your facility to make sure it meets your requirements.

Our emcware user friendly software provides automated testing and report generation for all your EMC needs, and if that wasn't enough, our revolutionary Multi-Star, Multi-Tone Tester tests multiple frequencies simultaneously, reducing radiated immunity test times from days to hours.

Best of all, we back our systems with unparalleled customer service and support.
